Python is a high-level, interpreted, general-purpose programming language. Created by Guido van Rossum and first released in 1989, Python was designed to help programmers increase productivity. Python resembles other scripting languages like Perl, but is more powerful. It has a simple, clear syntax that is easy to learn and use. Python is often used as a scripting language to glue together programs written in other languages. It is also used for web development, data analysis, and scientific computing.
