

**rate of change ib pdf**

Lecture 6 : Derivatives and Rates of Change In this section we return to the problem of finding the equation of a tangent line to a curve,  $y = f(x)$ .

**Lecture 6 : Derivatives and Rates of Change**

the instantaneous rate of change of  $y$  with respect to  $x$  at  $x_0$ , and also the slope of the line which best approximates the curve at  $x_0, y_0$ , called the tangent line to the curve (see Figure 1.2).

The following questions require you to calculate the rate of change. Solutions are provided in the PDF. The speed at which a variable changes over a specific amount of time is considered the rate of change. Real life problems as those presented below require an understanding of calculating the rate of change. Graphs and formulas are used to calculate rates of change. Finding the average rate of change is similar to a slope of the secant line that passes through two points.
